

A study on the development and application of housing materials for displaced people

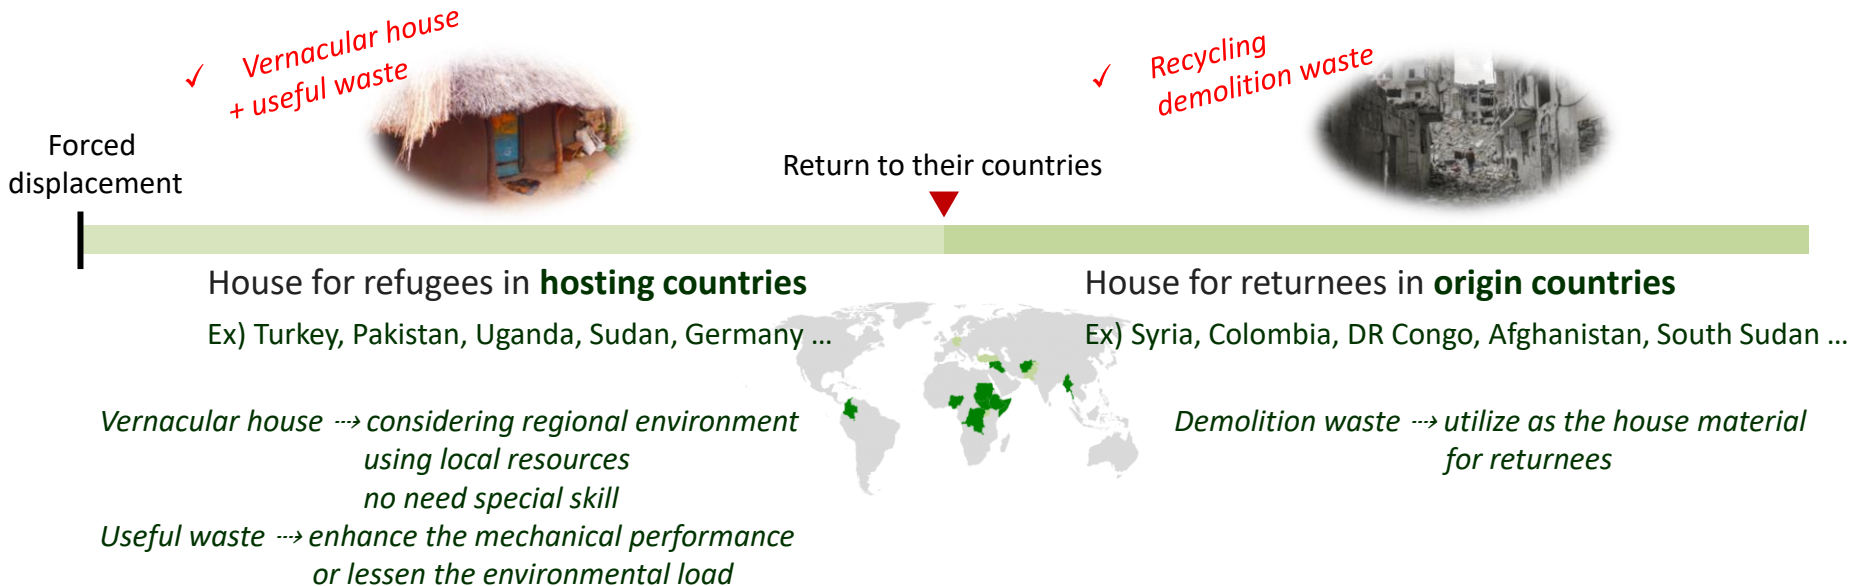

Background

- There were more than 70 million people who were forced to flee avoiding disasters including conflict, violence, persecution (end December 2018).
- Most of them live in shelters such as tent or temporary house which were provided by UNHCR (United Nations High Commission for Refugees).
- These shelters are not spaces for living but evacuating.
- Large amounts of demolition waste is being generated by these disasters.

In the field of building material, what can we do for improving these problems ?

➤ This study proposes the house where people who have lost everything can live with dignity and safely.

Concept

A study on the development and application of housing materials for displaced people
